NOT PASSING ON PASSIVE COOLING #THISISCOOL

Passive cooling is the practice of using non-mechanical technology, design elements, and/or nature-based solutions to keep a space cool without using energy

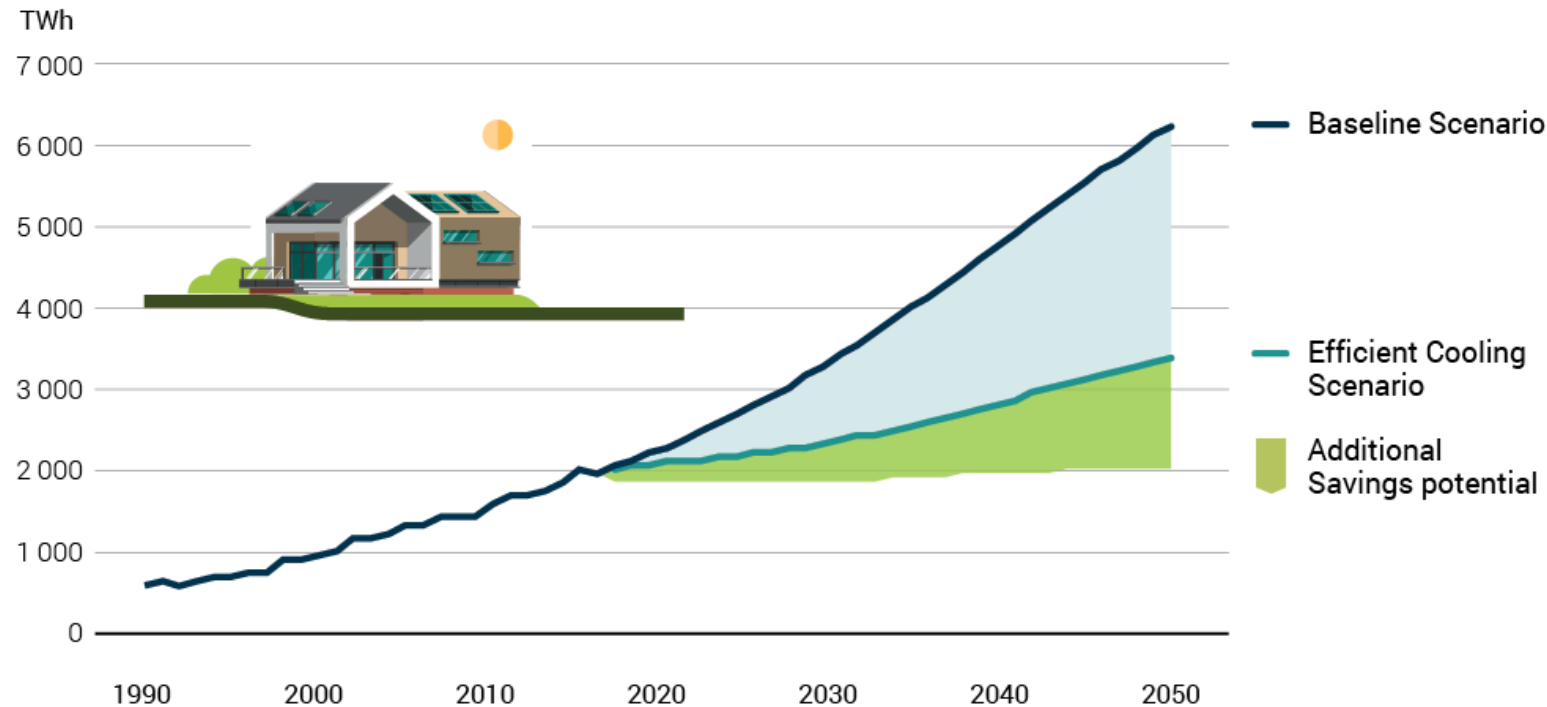

NOT PASSING ON PASSIVE COOLING #THISISCOOL

Many passive solutions can be incorporated into building, container, or environmental design and adapted to local climates

NOT PASSING ON PASSIVE COOLING #THISISCOOL

Passive cooling solutions can have an enormous mitigation potential in addition to efficient ACs

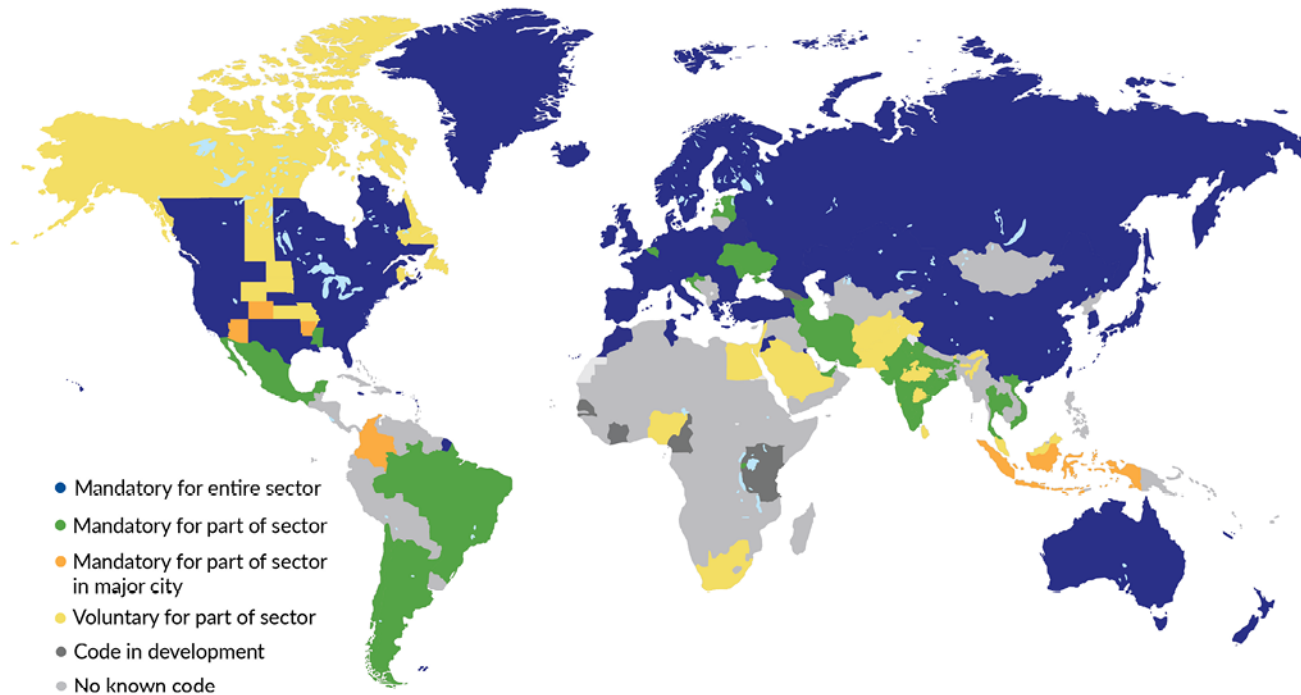

Additional energy savings potential from improvements to the building envelope

IEA 2018

NOT PASSING ON PASSIVE COOLING #THISISCOOL

1. Support the development of building codes that incorporate passive design elements

Map of building energy codes by country, state, and province in 2017

Global Alliance for Buildings and Construction (2019)

NOT PASSING ON PASSIVE COOLING #THISISCOOL

2. Promote access to cooling through passive solutions, focusing on heatwaves and net-zero cold chains

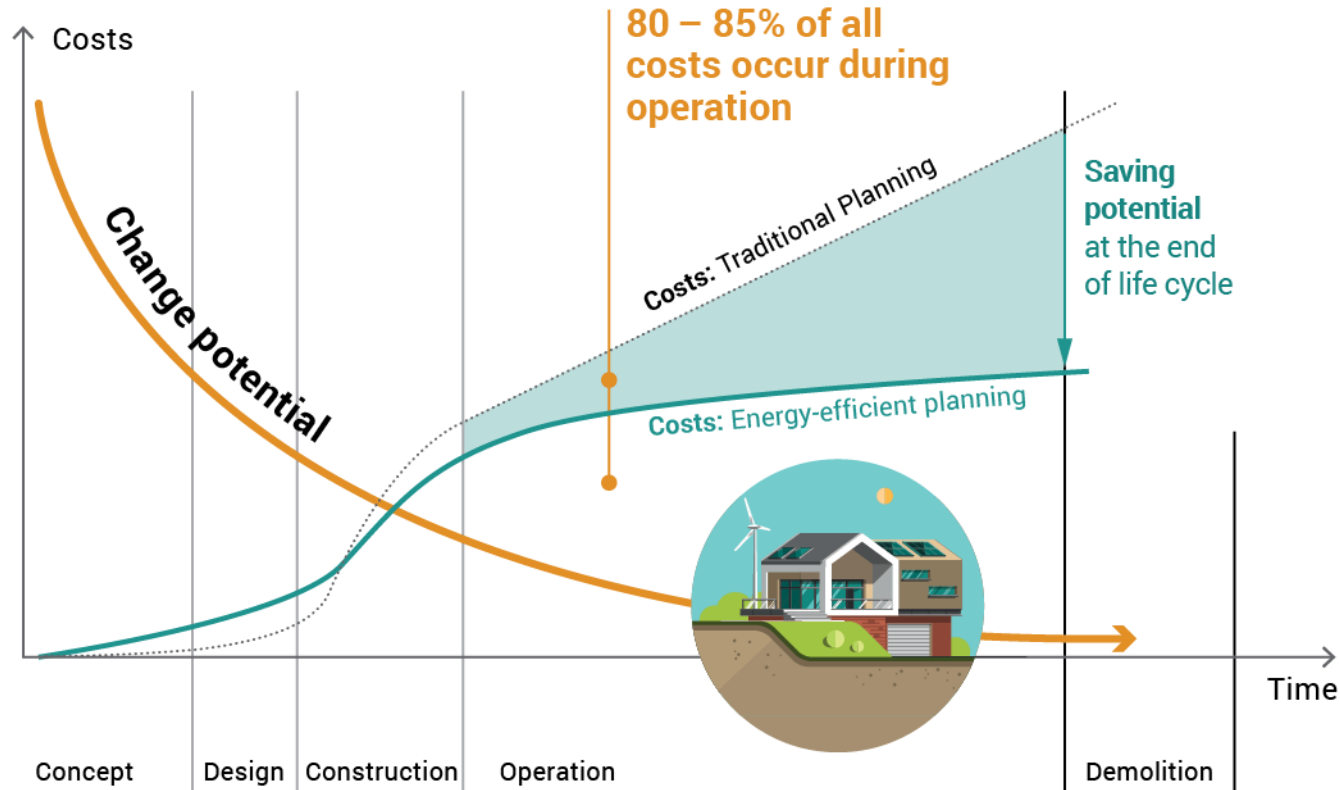

NOT PASSING ON PASSIVE COOLING #THISISCOOL

3. Raise awareness of passive cooling solutions through awards, challenges, and education

4. Build financial mechanisms to fund and de-risk passive cooling projects

Building design costs and change potential over time

NOT PASSING ON PASSIVE COOLING #THISISCOOL

Philanthropy can collaborate with governments, development agencies, and the private sector to lock in passive cooling wins
